Mouse 5hmC & 5mC DNA Set

Cat. No. D5019
Storage: -20 °C

Product Information

Highlights:
- Precisely quantified levels of 5-methylcytosine and 5-hydroxymethylcytosine verified via mass spectrometry (LC/MS)
- Useful control for detection methods of 5-methylcytosine or 5-hydroxymethylcytosine

Description:
The Mouse 5hmC & 5mC DNA Set is a set of organ specific mouse genomic DNAs isolated from a pool of 8-10 week old Swiss Webster mice. This genomic DNA set is an ideal control for detection and/or quantification methods against 5-methylcytosine (5mC) and 5-hydroxymethylcytosine (5hmC) as both modified cytosines are present at physiologically relevant levels and loci. The levels of 5-methylcytosine and 5-hydroxymethylcytosine within the Mouse 5hmC & 5mC DNA Set have been precisely quantified by mass spectrometry (LC/MS) and been validated to be consistent by ELISA. Percentages of each modified cytosine are listed below.

Mouse 5hmC & 5mC DNA Set ELISA Assay

Anti-5-methylcytosine or anti-5-hydroxymethylcytosine antibodies were confidently able to reproduce trends in levels of 5-methylcytosine and 5-hydroxymethylcytosines quantified by mass spectrometry.

Product Specifications:

Source: Swiss Webster mice, 8-10 weeks old.
Concentration: 250 ng/µl in modified TE buffer (10mM Tris-HCl; 0.1mM EDTA; pH 8.0).
Storage: ≤ -20 °C
